INFORMATION SERVICES VENDOR FINANCIAL WATCH

April 1985

HJ 1/VFW/S3/2
C.1

AUTHOR
Veterans Financial Watch
TITLE

DATE LOANED	BORROWER'S NAME

CAT No 23-108 PRINTED IN U. S. A.

I INTRODUCTION

- The Vendor Financial Watch (VFW) is a quarterly INPUT analysis of up-to-date financial reports of public information processing services, professional services, software products, and turnkey systems companies, both for comparative purposes (vendor to vendor) and to enable participants in a given sector of the information services market to monitor the overall growth of their sector.

- Each sector of the information services market is analyzed separately, both from a revenue and from a net income standpoint. The growth trends are analyzed in the last three columns of each data sheet in increasing calendar sequence; this is intended to provide an indication of the very latest developments in revenue and net income growth.

- Each information services market sector is also commented on separately, highlighting individual company successes and failures, and the trend in the market sector as a whole. The summary analysis at the back of the VFW report analyzes the comparative trends between sectors and comments on the trend of the total Information Services market. This section is particularly important since it identifies growth patterns very clearly.

- This quarterly Vendor Financial Watch report is intended as a planning tool for market planning executives and as an information newsletter for company executives. The data contained are extracted from published sources, annual reports, and 10-K reports, supplemented by INPUT's estimates (denoted by a * following a value) where data was not yet available from the company.

- This issue covers 100 information services vendors.

update: 4/1/85

II DATA REPORTED

- The VFW report is divided into two sections:
  - A summary of last quarter's acquisitions.
  - Information services companies' financial performance.
- Financial data provided includes each vendor's revenue and net income, reported on a calendar quarterly basis and comparisons on performance provided for:
  - 1984 versus 1983 (year on year);
  - Last calendar nine months' results compared to the year earlier period;
  - Last calendar six months' results compared to the year earlier period.
- Fiscal quarterly revenue is approximated to calendar quarterly revenue as follows:
  - Quarterly revenue reported as of February, March, and April is reported as Q1;
  - Quarterly revenue reported as of May, June, and July is reported as Q2;
  - Quarterly revenue reported as of August, September, and October is reported as Q3;
  - Quarterly revenue reported as of November, December, and January is reported as Q4.
- Fiscal year-end dates are provided in column 2 so that actual quarters for each company can be identified. Values that are followed by an asterisk (*) are INPUT estimates, pending release of the final results from the vendor. These are included so that the overall totals for each sector may be as complete as possible.

update: 4/1/85

ACQUISITIONS ANALYSIS

III ACQUISITIONS ANALYSIS

- The following section is part of a series of quarterly analyses of acquisition activity in information services. Reporting on acquisitions tends to lag actual transactions by one month, so that the Vendor Financial Watch, in any given quarter, will be reporting on acquisitions that occurred up to four months earlier.

- In this first VFW for 1985 we have analyzed the acquisitions in the fourth quarter of 1984. The list that follows is alphabetized by quarter.

- Software companies constituted 12 of the 19 acquisitions contained in VFW's fourth quarter 1984 transaction list, or more than half the total. Once again, despite exceptional revenue growth and net income performances by turnkey vendors (up 40% on average for revenue and in excess of 50% on average for net income in the last two quarters of 1984) acquirors continue to shun the turnkey sector.

- Software companies, on the other hand, are divided into two categories:

  - Application-oriented software vendors who are experiencing a rapid decline in orders and profitability;

  - System software vendors who are having a very successful period of solid revenue and net income gains.

  Acquisitions in the fourth quarter of 1984 reflect, for the most part, acquirors' understanding of this trend.

- The key to the mode of transaction for each company is: B=buyout, C=cash, D=debt securities or debentures, M=merge, N/A=not available.

update: 4/1/85

PUBLIC PROCESSING SERVICES VENDORS

IV PROCESSING SERVICES TREND ANALYSIS

- Growth of the processing services sector shows a slight decline in the latest quarterly analysis:

  - 1984 revenue grew 18% over 1983 (for the 31 company sample);
  - Rolling nine months' revenue comparison shows a 17% growth;
  - The last six months' revenue in 1984 grew 16% over the year earlier period.

  Citizens Financial continues to be the fastest growing in terms of revenue on a percentage basis, but ADP contributed the most revenue growth in dollar terms. Good revenue performances were also shown by Cycare, Compuserve, Computone, Paychex, and Telerate.

- Net income is still erratic:

  - Down 7% in 1984 over 1983;
  - Up 15% in the last nine months over the year earlier period;
  - Up only 1% in the last six months over the year earlier period.

- These results are heavily impacted by continued poor income performance from Anacomp, Bradford National, and Comshare. In addition, year-end losses continued at Keydata and Payfone. Anacomp had the largest single year loss ever recorded in the processing services industry in 1984--over $82 million.

- The best performers are well focused, specialized service companies. Cycare, Paychex, ADP, Shared Medical, and Systematics have retained excellent net income on a steady revenue growth curve.

- Total sample: 31 companies representing 19% of the processing services industry revenues. Note that on the accompanying graphic, Anacomp's results have been removed to avoid distortion of the entire sample. This modifies the growth picture significantly.

INPUT®

PUBLIC PROFESSIONAL SERVICES VENDORS

V PROFESSIONAL SERVICES TRENDS ANALYSIS

- The growth of revenues in the professional services sector has stabilized on a slight downward trend, as is demonstrated this quarter.
  - 1984 revenues grew 14% over 1983 (compared to 16% in 1983 over 1982);
  - The last nine months' revenue comparison shows a 14% growth;
  - The last six months' revenue results for 1984 for the same company sample shows a 13% increase over the previous six months.
- Net income growth shows a weakening pattern however:
  - 26% up in 1984 over 1983;
  - 22% up in the rolling three quarters analysis;
  - A smaller 16% up in the latest six months.
- A number of small- and medium-sized vendors continue to show excellent growth patterns:
  - AGS Computer (a multiservice vendor);
  - CGA Computer.
  - Computer Task Group.
  - Keane.
  - Logicon.
  - Systems & Computer Technology.
  - Technalysis.
- While many such vendors show very strong revenue growth, a small number show either a decline (202 Data Systems, CACI, Data Architects, Rand Information Services) or stagnation (ACT, Advanced Systems, CSC, Planning Research Corporation).
- The total sample this quarter is 25 companies or 33% of the professional services industry's total revenue.

PUBLIC SOFTWARE PRODUCT VENDORS

VI SOFTWARE PRODUCTS TRENDS ANALYSIS

- The rapid growth of the software products sector slowed significantly in the last quarter of 1984:
  - 1984 revenues grew 31% over 1983 (as compared to 43% for 1983 over 1982) while the nine months' comparison showed a 27% growth;
  - The rolling six months' revenue results show a 23% growth over the year-earlier period completing a pattern of rapidly cooling in the industry's development.
- Net income continues to fall:
  - 1984 net income grew 15% over 1983 but was followed by a rolling nine months' contraction (-1%);
  - The last six months have seen a continuation of the contraction trend (-3%). These averages are impacted by BPI Systems, Innovative Systems, Information Sciences, On-Line Software, and NCA which all had poor quarters.
- This is still a very strong market in selected vertical and cross-industry markets and some very solid results from the principal vendors illustrate this:
  - Data base management systems continue to grow strongly, with companies like Cullinet, Pansophic, and Software AG at or above 30%;
  - Lotus Development still growing over 100% in the last three analysis periods, and net income growth over 80% in the same periods.
- Many personal computer software vendors have still to be included because they do not have a two-year financial track record yet (and some look as though they may not get that far). The sample this quarter is 26 companies representing 17% of the total software product industry's revenues.

PUBLIC TURNKEY SYSTEMS VENDORS

VII TURNKEY SYSTEMS TRENDS ANALYSIS

- The revenue trend of turnkey system vendors over the last 12 months has been one of steady strong growth:
  - 1984 revenue grew 36% over 1983 (for the sample);
  - The rolling nine months' comparison shows a 36% growth;
  - The latest six months shows a 31% growth over the previous year.
- Net income continues to soar. In 1984 the companies listed averaged 57% growth over 1983 and in the last six months had a 32% growth over the year earlier period.
- Outstanding performances are becoming more numerous:
  - ASK Computer had a strong 50% growth in 1984 followed by 47% over the last nine months (on a growing revenue base) and a steady net income growth in excess of 30%.
  - Avant Garde has shown dramatic gains with revenue up over 58% in 1984 and net income up 71%.
  - Computer Consoles shows a strong recovery with seven consecutive profit quarters (although profits have dropped recently).
  - Daisy Systems had an astonishing 188% growth in 1984 over 1983, 158% in the last nine months, and 132% in the last six months.
  - Intergraph shows steady revenue growth around 60% and net income growth over 100%.
- The overall picture is now excellent with the exception of companies such as C3, DIMIS, and National Data Communications showing sharp reversals and companies such as PENTA Systems still struggling.
- The sample this quarter is 18 companies representing 37% of the turnkey systems industry revenues.

PUBLIC INFORMATION SERVICES VENDORS ANALYSIS

VIII PUBLIC INFORMATION SERVICES VENDORS ANALYSIS

- The comparison of the quarter growth rates (e.g., 1984 growth in Quarter 1 compared to 1983 growth in Quarter 1 for a given service sector) enables the rate of recovery (or lack thereof) to be clearly identified for each sector.

- The **processing services** sector, recovered from the revenue slump in Q2-Q3, 1982, appears to be entering another difficult period. Net income growth shows an uneven performance with vendors split into two groups: very successful and serious loss making. This quarter a much needed recovery in net income failed to materialize.

- The **software products** sector had a strong first two quarters in 1984 but has now slowed to 30%. Net income growth has stopped and a shakeout can be expected in 1985.

- The **professional services** sector plateaued in revenue and lost the net income performance of the previous four quarters. No growth was achieved in this quarter.

- **Turnkey systems** revenue growth cooled in the last quarter. Net income is strong and shows the best growth picture of all the information services sectors.

- Overall, the information services industry recovered in the first half of 1984 from an unspectacular 1983, but the second half results look problematic. Net income is heavily impacted by the poor performance of the processing services sector in the third quarter of 1984.

- The total sample has been increased this quarter to 99 companies representing 24% of the total information services industry.

About INPUT

INPUT provides planning information, analysis, and recommendations to managers and executives in the information processing industries. Through market research, technology forecasting, and competitive analysis, INPUT supports client management in making informed decisions. Continuing services are provided to users and vendors of computers, communications, and office products and services.

The company carries out continuous and in-depth research. Working closely with clients on important issues, INPUT's staff members analyze and interpret the research data, then develop recommendations and innovative ideas to meet clients' needs. Clients receive reports, presentations, access to data on which analyses are based, and continuous consulting.

Many of INPUT's professional staff members have nearly 20 years' experience in their areas of specialization. Most have held senior management positions in operations, marketing, or planning. This expertise enables INPUT to supply practical solutions to complex business problems.

Formed in 1974, INPUT has become a leading international planning services firm. Clients include over 100 of the world's largest and most technically advanced companies.
